

With spending at the pump up \$80 a month, Americans need better gas mileage now.

REASON
#2

SAVINGS

As the summer driving season begins, gas prices have already reached their highest level in history. Families now spend \$80 more per month for gas than they did just seven months ago.* That's a week's groceries, or two days' pay at the minimum wage. And it's another reason why we need to move quickly toward a major improvement in the gas mileage of new cars and trucks. We can't delay any longer.

It's time to increase gas mileage for new cars and trucks.

More reasons at PewFuelEfficiency.org

*Based on US Energy Information Agency and NHTSA data at two vehicles per household.
